

Keep Costs Down and Production Levels High

Comparing a Netafim drip irrigation system to a conventional watering system is like comparing a hand saw to a power saw. A hand tool is fine if you have the time, but for production scale growing, power tools are a terrific step forward.

For over 20 years, Greenhouse and Nursery growers across the U.S. have come to the same conclusion - irrigating with a highly-efficient drip irrigation system from Netafim USA is a more profitable solution to expensive and less efficient sprinkler systems.

Uniformity

Precise amounts of water and fertilizer are delivered directly to each container:

- Increasing crop yields
- Shortening growing period
- Improving crop quality

Dramatically Reduces Labor

- Irrigate large areas with less water at lower pressures
- Gives operators full control of irrigation time, volume and water distribution

No Runoff

Water is delivered directly to the container:

- Eliminating fertilizer waste
- Reducing water and energy costs

During these times you need a solution to your water problem. Make that solution **"The Total Growing Solution"** from Netafim USA.

Benefits of using Netafim Drip Irrigation Systems

- Conserves water
- Reduce chemical & fertilizer usage
- Slow even flow of water to plants and soils
- Easy to install - flexible and adaptable
- Eliminates foliage problems related to overhead irrigation
- Improved plant growth
- Saves on maintenance & labor
- Reliability and performance
