

# WE KNOW HEMP

Griffin works with hemp growers around the country. We understand liner production, field production, and greenhouse production. We would love to help you get your hemp project off the ground with success.

Griffin is a family-owned, full-service, horticultural distribution company serving growers across the United States. Our Controlled Environment Agriculture (CEA) Division is a specialized division that focuses on supporting growers of edible and medicinal crops. We work with growers producing crops in warehouses, greenhouses, high tunnels and fields. Our focused team brings expertise in structures, equipment, production supplies, culture, fertility, crop protection and more. Working with us, our customers find that our support results in top quality crops with improved operational efficiency for increased profitability. Let us know how we can help you!

## Structures and Equipment

Our team members are experts at combining proven horticultural products with new technologies to provide solutions for greenhouse hemp production - for stock, liners and harvestable crops. From benching and lighting to light deprivation and nutrient injection, we know what works and how to best combine all the options to fit your unique operation. Regardless of the facility size, we start with your crop goals and personalize the solution to fit your crop needs.

## Field Solutions

Horticultural, field grown hemp has some special needs to ensure a healthy crop. Most importantly, the crop requires irrigation. Our team will design the perfect system for you - whether you are growing in the ground with mulch film or above ground in pots.

## Customized Nutrient Programs

Our team works with our GGSPRO experts to develop nutrient programs specific to your needs. We tailor the program to your water quality, media and production philosophy (conventional or organic). Our comprehensive programs walk you through every step, including instructions for stock tank and reservoir prep. Ask about our programs for greenhouse crops and potted field crops. We also provide guidance for using granular, organic products for in-ground field crops.

## Personalized BCA Plans

Success with BCAs is all about prevention. Our team will help you implement and continue a successful BCA plan that will virtually eliminate the need for chemical control of insects and mites through consistent, early action. Just like our nutrient programs, our BCA plans are created for your specific production scenario and needs.

## GGSPRO

GGSPRO is the in-house technical support team for the Griffin family of businesses. The team brings more than a century of combined experience to the table, in service and support to all Griffin customers. GGSPRO strives to provide prompt, practical and accurate technical support, in understandable terms, in order to enhance crop quality and profitability. The team's areas of expertise include crop culture, sanitation protocols, plant physiology and pathology, chemical controls, biological control agents (BCAs) and nutrition.

Let's grow something  
**Altogether. Better.**
